**Subject:** Information on my dermasilk clothes

can you advise on the max .number of washes I can carry out on my infants dermasilk garments before needing replacement to maintain the antimicrobial properties.

I'd like to thank all for the swift response to orders as I find the service excellent and the product has been fantastic in helping manage my 4 yr old son with severe eczema.

For information. The antimicrobial is permanently bonded to the fabric and cannot be washed off. This means that there are no maximum wash limits. DermaSilk remains effective for as long as you can wear it.
